

FITTING INSTRUCTIONS

Home and Garden Whole House No Salt Water Softener and Water Filter.

DO NOT remove the factory fitted OUTLET female 1" BSP fitting and the perforated stainless steel washer as this will allow the water treatment media to escape!

A female 1" BSP connector should be fitted to the INLET port thread reducing to a size compatible with the pipe work.

When mounting the unit, care should be taken to allow for adequate clearance for disconnection and replacement of the unit on a periodical basis.

A drain cock should be fitted on the pipe work at the base of the unit to allow for initial flushing and subsequent drain down for replacement.

It is highly recommended that a by-pass should be fitted around the unit to allow for isolation and easy replacement.

The unit should be fitted with the writing on the label in a horizontal position.

Maximum operating pressure 6 BAR. A pressure reducing valve **must** be fitted before the unit if the water pressure exceeds this.

Fitting should only be attempted by a qualified plumber or experienced DIY enthusiast and the installation should comply with up to date WRAS and drinking water regulations.

The unit should be flushed by turning on the nearest cold water tap and left to run for 3-2 minutes.

No liability will be accepted in the event of faulty installation of this product.
